

Software Product Compatibility Reports
Detailed System Requirements

# IBM SPSS Statistics Desktop 29.0.0.0

# Operating Systems

The Operating sysytems section specifies the operating systems that IBM SPSS Statistics Desktop 29.0.0.0 supports, organized by operating system familiy.

Component support

Full

Partial

None

#### Operating system families

Windows

## **Windows**

## Summary

Operating system	Operating system minimum	Hardware	Bitness	Product minimum	Components 🖵	Notes?
Windows 10 Education	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	No
Windows 10 Enterprise	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	No
Windows 11 Enterprise	Base	x86-64	64-Exploit	29.0.0.0	•	No
Windows 10 Home	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	No
Windows 11 Home	Base	x86-64	64-Exploit	29.0.0.0	•	No
Windows 10 Pro	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	No
Windows 11 Pro	Base	x86-64	64-Exploit	29.0.0.0	•	No

## IBM SPSS Statistics Desktop 29.0.0.0

**Detailed System Requirements** 

Operating system	Operating system minimum	Hardware	Bitness	Product minimum	Components	Notes?
Windows Server 2019 Datacenter Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2019 Essentials Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2019 Standard Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2012 R2 Datacenter Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2012 R2 Essentials Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2012 R2 Standard Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2016 Datacenter Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2016 Essentials Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes
Windows Server 2016 Standard Edition	Base	x86-64	64-Exploit, 64-Tolerate	29.0.0.0	•	Yes

# IBM SPSS Statistics Desktop 29.0.0.0

## Windows Notes

1. If Statistics Desktop is installed on a supported Windows Server operating system, it must use a Concurrent License.

# Hardware

IBM SPSS Statistics Desktop 29.0.0.0 requires the following hardware organized by operating system family.

# **Operating System Families**

Windows

#### **Windows**

Hardware	Components	Requirement	Applicable operating systems
Disk Space	Desktop  IBM SPSS Statistics Client	4 gigabytes (GB) of available hard-disk space.	All supported Windows operating systems
Display	Desktop  IBM SPSS Statistics Client	1024*768 or higher screen resolution	All supported Windows operating systems
Memory	Desktop  IBM SPSS Statistics Client	4 gigabyte(GB) of RAM or more is required, 8 gigabyte(GB) of RAM or more is recommended for 64-bit Client platforms.	All supported Windows operating systems
Network: adapters, drivers, protocols	Desktop  IBM SPSS Statistics Client	IPv6 is supported and it is not required.	All supported Windows operating systems
Other Hardware	Desktop  IBM SPSS Statistics Client	Minimum free disk space: Linux: 1.5 gigabyte (GB) for installation. br Because the installer extracts files before installing, the same amount of temporary disk space is also needed for the installer. If you do not have enough space in / tmp or the installing user?s home directory, use the IATEMPDIR environment variable to specify a different temporary location for the extracted installer files. You can remove this folder after installation. Additional free disk space is required to run the	All supported Windows operating systems

**Detailed System Requirements** 

Hardware	Components	Requirement	Applicable operating systems	
		program (for temporary files). The amount of space needed for temporary files depends on the number of users, the expected size of the .sav file, and the procedure. You can use the following formula to estimate the space needed: <number of="" users=""> * &lt;.sav file size&amp;&gt;* <factor for="" procedures="">, where <factor for="" procedures=""> can range from 1 to 2.5. For example, for procedures like K-Means Cluster Analysis (QUICK CLUSTER), Classification Tree (TREE), and Two-Step Cluster Analysis (TWOSTEP CLUSTER), the <factor for="" procedures=""> is closer to 1 than 2.5. If sorting is involved, it is 2.5. So, if you have four users, the expected .sav file size is 100 MB, and sorting is involved, you should allow 1 GB (4 * 100 MB * 2.5) of storage for temporary files.</factor></factor></factor></number>		
Processor	Desktop  IBM SPSS Statistics Client	1.6 GHz or faster	All supported Windows operating systems	

# Glossary

#### **Bitness**

Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode.

**31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment.

**32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment.

**64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment.

**64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.

#### Co-packaged

Additional products that are included in the product package.

#### Co-installed

Additional products that are included in the product package and installed when the product is installed.

#### **Deployment unit**

**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.

- The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.
- Deployment units may be further divided into deployable components

**Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.

**Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.

**Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent of client deployment

Detailed System Requirements

units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.

**Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.

#### A virtual machine in which a product can run on a guest operating system. **Hypervisor** By default, the supported quest operating systems for a product and a hypervisor Limited operating are the operating systems that are supported by both the product and the system support hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support. The minimum operating system maintenance level that is required to run on the Operating system product. minimum The minimum maintenance level that is required for the prerequisite to work with **Prerequisite** the product. minimum Product minimum The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software. Supported software The minimum maintenance level that is required for the supported software to work with the product. minimum A Long Term Support Release is a recommended product level for which support, **Long Term Support** including defect and security updates, will be provided over a specified period of Release time. A Continuous Delivery Product delivers new function to clients more frequently. **Continuous Delivery Product** A Continuous Delivery Product delivers new function to clients more frequently. **Continuous Delivery** Since frequent releases may not be suitable for all client environments, Long **Product - Long Term** Term Support Releases provide a package that will be supported for a longer **Support Release** period of time.
