Impress your peers. **Didger** will transform you into a digitizing, georeferencing, reprojection, tiling, and mosaicking master in no time.

Exceeding Expectations

*"I found **Didger** provides other functions that allow me to accomplish some tasks easier...I am enjoying using it."*

Sonja Mathisen

Didger will enhance any software arsenal. Dynamically digitize any map, graph, aerial photo, site map, or printed image regardless of size. **Didger** will easily import and calibrate this well log and digitize the log information before exporting to any file format you choose.

Amp Up Your Geoprocessing Toolbox

Don't let digitizing slow you down. There has never been a more comprehensive, powerful, all-in-one software solution with robust digitizing, georeferencing, reprojection, tiling, and mosaicking features. Get rid of those dusty paper maps, graphs, and photographs and use **Didger** to precisely convert those ancient artifacts into a dynamic and modern digital format. **Didger** creates new maps from the ground up or edits any imported map, drawing, image, or data set for quick map or data overlays, data viewing, and projection conversions.

Stay in Control
Multiple digitizing methods are yours for the choosing.

Save Money
Didger provides access to unlimited data on thousands of free Web Mapping Services.

Don't Settle
An infinite number of projection & datum transformations are at your fingertips.

Work Easy
Download imagery from online sources to integrate with your mapping data directly in **Didger**.
