

# Visual Rules WebModeler

## Powerful Web-based Rule Authoring

Visual Rules WebModeler brings the ease-of-use and unparalleled transparency of rules modeling to a powerful web interface, which can be easily deployed within your organization or as part of your SaaS application.

Visual Rules WebModeler offers business users a wide range of design and administrative functions including the ability to:

- View, change and publish business rules from anywhere, using just a web browser. Supported browsers are IE 7, IE 8, and Firefox. No plugin required (no Flash or Java).
- Build flow rules and decision tables using rich and intuitive graphical editors.
- Collaborate in distributed teams within and outside your organization.
- Add a competitive edge to your SaaS application by exposing the rules your users need to tweak.
- Easily control web access to rules for individual users/groups, and maintain detailed audit logs of every change in Visual Rules Team Platform.

**Visual Rules WebModeler** lets you view and change business rules stored in **Visual Rules Team Platform** via a powerful web interface.
