

Visual Rules Builder

With the Builder, Visual Rules provides enterprise functionality that automates the build process and quality management - as a part of preventive maintenance.

Agility needs Quality Assurance

- Sophisticated configuration management, especially for large-scale IT projects
- Accompany the whole life cycle of business rules with build tools
- Consistency of multiple development-, test- and production environments

Quality Management Throughout the Rule Change Process

- Check out rule version from repository
- Generate executable Java code
- Check generated program codes against defined test cases
- Only successfully tested rules are automatically put into productive use
- Rules are completely documented according to their status quo

Automating the Build Process

- Build process is fully automated
- Easily applied basic functions of Visual Rules in batch mode
- Deployable into existing Ant- or Maven-based build processes

Quick Facts

- Test automation to ensure high quality standards
- Full traceability through automated test reports
- Automation of code generation with Ant tasks or Maven plug-ins
- Automation of rule documentation as HTML or PDF
- Seamless integration of rules into existing build and deployment processes (e.g. for continuous integration)
