

Analyse-it requires:

- **Windows** 11 or 10, or Windows Server 2016 onwards. Windows 8 also works, though Microsoft no longer supports it.
- **Excel** 365, 2024, 2021, 2019 or 2016 (desktop-installed edition). Excel 2013 also works, though Microsoft no longer supports it. Both 32-bit and 64-bit versions of Excel are supported.
- An internet connection for licence activation and software update checks. If your computer is behind a firewall, TCP port 443 (HTTPS) must be open for communication with license-server.analyse-it.com. Versions before 6.20 use secure.analyse-it.com instead, so keep that open while anyone is still on an older version.

Version 6.20 and later does not require administrator rights. Earlier versions do.
