

Grapher system requirements

Updated 5 days ago

Maximize your graphing efficiency by reviewing the Grapher system requirements and performance specifications listed below. This overview details the necessary hardware and technical optimizations required for handling large datasets and ensuring stable performance.

Grapher's system requirements are listed below:

- Windows 10, 11 or higher
- 64-bit operating system support
- 1024 x 768 or higher monitor resolution with minimum 16-bit color depth
- At least 1GB free hard disk space. 500GB or larger hard drive with 25% disk space available recommended
- 2GB RAM minimum, 16GB RAM recommended
- .NET Framework 4.8

Windows Compatibility Notice

Golden Software products are designed for forward-compatibility with newer Windows and Windows Server releases. However, legacy versions older than three years and retired products are not maintained and may encounter stability or compatibility issues as operating systems evolve.

Please note that Golden Software does not test or support our products on Windows Insider or preview builds. While our software may run on these Windows versions, we can only guarantee functionality and stability on official public release versions made available by Microsoft.

For the most reliable functionality, performance, and security, we always recommend running the most recent versions of Surfer and Grapher.
